Specialty Solutions Product Data

QuadroClad Specialty solutions offer architects unique facade design tools. These offerings range from ventilated solutions to specialty materials.

SYSTEM OPTIONS:

AuraWeave™

- *AuraWeave™ offers new tools for enclosures such as parking structures, stadiums or other open-air applications that require natural ventilation.*

Specialty Metals

- **Pre-Patinated Copper**
Hunter Douglas has developed a proprietary pre-patination process that allows architects to control the color and level of patination in an engineered copper facade system.
- **Weathering Steel**
Weathering steel is a specialty alloy that develops a relatively uniform and controlled layer of rust for a naturally weathered facade.

Perforated MPF

- *Perforated MPF offers additional screening potential with different visual read as lighting changes throughout the day.*

Polycarbonate EcoResin

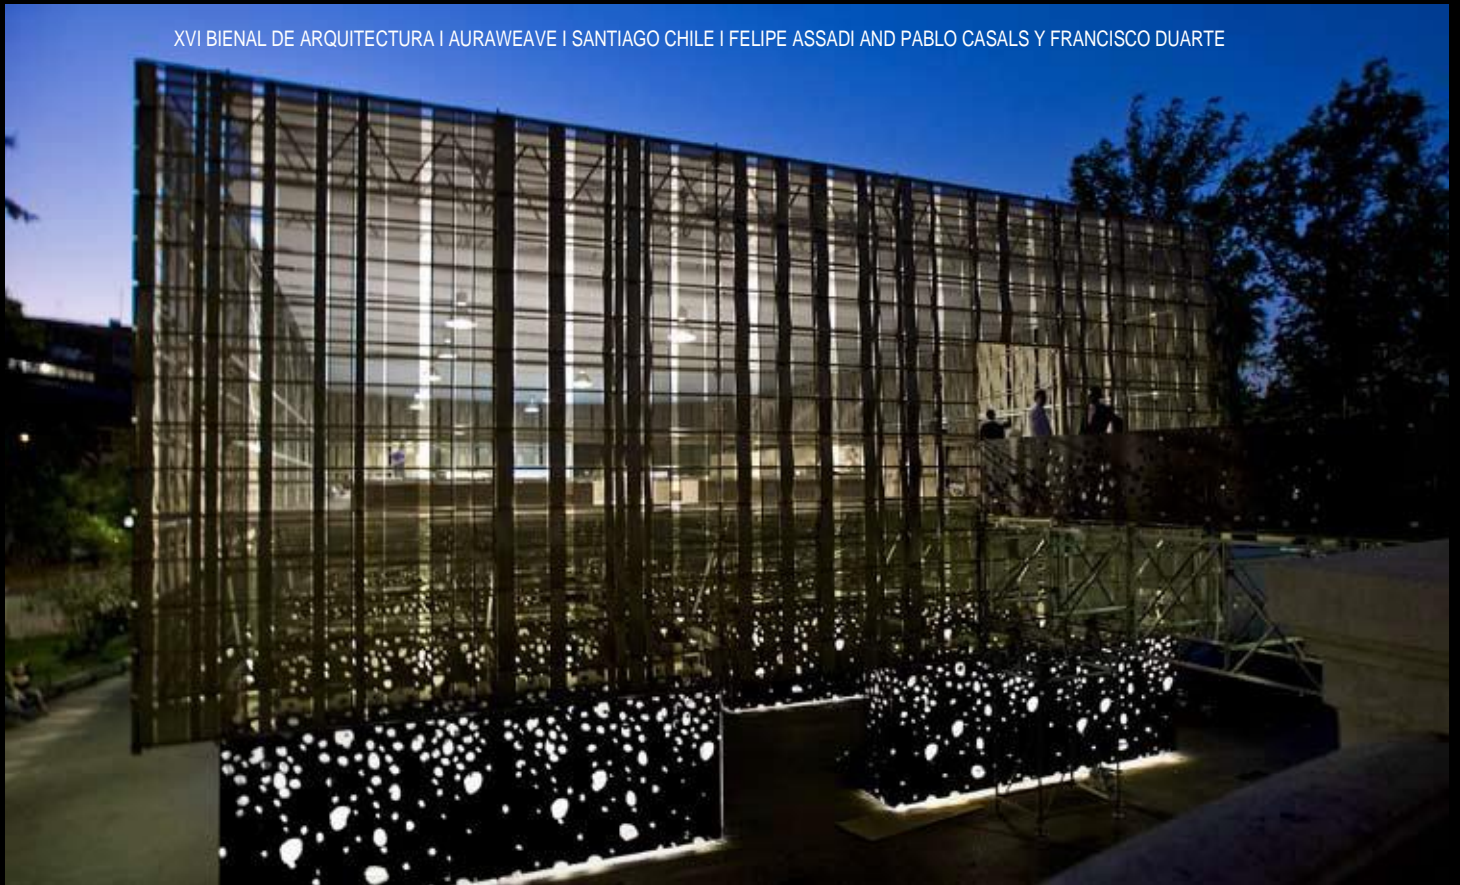

- *Resin system developed in collaboration with 3Form to allow clients to design with form and light for unique facade features. Panels can be made with various opacities depending on design intent, which can allow for many backlighting opportunities.*
